

2006 ABSTRACTS

- Zhu, M.J., M. Du, P.W. Nathanielsz, B.W. Hess, and S.P. Ford. 2006. Maternal nutrient restriction upregulates growth signaling in the cotyledonary artery of the cow placentome. Proceedings, Society for Gynecologic Investigation, Toronto, Ontario, Canada (Abstract #42)
- Ford, S.P., N. Edwards, M.J. Zhu, B.W. Hess, and P.W. Nathanielsz. 2006. Maternal nutrient restriction from early to mid-gestation in the ewe alters ocular vascularity in twin fetuses. Proceedings, Society for Gynecologic Investigation, Toronto, Ontario, Canada (Abstract #94)
- Zhu, M.J., Q.W. Shen, S.P. Ford, P.W. Nathanielsz, and M. Du. 2006. Maternal nutrient restriction alters carnitine palmitoyltransferase-1 activity and myosin isoform composition of offspring skeletal muscle. Proceedings, Society for Gynecologic Investigation, Toronto, Ontario, Canada (Abstract #363)
- Zhu, M.J., M. Du, P.W. Nathanielsz, B.W. Hess, and S.P. Ford. 2006. Gestational age and nutrient restriction induced changes in angiotensin II (ang II) receptor expression in the cotyledonary (cot) and caruncular (car) arteries of the bovine placentome. Proceedings, Society for Gynecologic Investigation, Toronto, Ontario, Canada (Abstract #450)
- Ford, S.P., M.J. Nijland, M.M. Miller, B.W. Hess, and P.W. Nathanielsz. 2006. Maternal undernutrition advanced placentomal type, in association with increased placentomal size, and cotyledonary (cot) blood flow. Proceedings, Society for Gynecologic Investigation, Toronto, Ontario, Canada (Abstract #451)
- Du, M., Q.W. Shen, N.E. Schlabritz-Loutsevitch, S.P. Ford, and P.W. Nathanielsz. 2006. Global 30% nutrient restriction (NR) from 30 to 165 days gestation (dG) decrease Erk1/2 and Erk 1/2 phosphate (P) but not Akt or P-Akt in the baboon placenta (Plac). Proceedings, Society for Gynecologic Investigation, Toronto, Ontario, Canada (Abstract #470)
